Due date: Friday October 23 at 11:59pm

Your task: In this assignment,

Basic Requirements:

1. Add a route to the homepage so that it would render the dynamic page `home.ejs`
2. Create an object that contains the property username. Set its value to your name, then pass this object to the dynamic page `home.ejs`.
3. Modify the `home.ejs` file to support dynamic output for your username.
4. Make sure that static files are linked and the `CSS` is property loaded.
5. Add the routes to handle the render of the `about` and contact `pages`.
6. Ensure all links use the appropriate endpoints.
7. Add the partials to the `home, about` and `contact` pages to show the header and footer on those pages.
